Teacher Guide for the 36-week, 7th-8th grade *science* course!

The vital resource for grading all assignments from the *Introduction to Anatomy & Physiology* course, which includes:

- Instruction on the cardiovascular, respiratory, and musculoskeletal systems, from the level of the cell to the organs themselves, and God's masterful wisdom in His creation.
- Assessments including worksheets, quizzes, and tests are given at regular intervals with space to record each grade.

OVERVIEW: In this dynamic *Introduction to Anatomy & Physiology* course, students will not only begin to grasp the intricate workings of their bodies, but learn also of the wonders of the human body, designed by our Creator and loving Father. Nothing else in the universe is quite like it. The body is delicate yet powerful; incredibly complex but at times amazingly simple. Students will explore the structure, function, and regulation of the body in detail. Throughout the two volumes studied over the course of the year, students will learn things to do to keep the body healthy, though in a fallen, cursed world things are bound to go wrong. The human body is built from many kinds of cells and tissues, and students will learn how they work. We will look at what happens when disease or injury affects bones and muscles. Although the world insists that our bodies are merely the result of time and chance, as students examine the human body closely, they will see that it cannot be an accident. It can only be the product of a Master Designer.

FEATURES: The calendar provides 5 lessons weekly with clear objectives, and the worksheets, quizzes, and tests are all based on the readings from the two books.
