Heinrich Meyr, Marc Moeneclaey, Stefan A. Fechtel

Digital Communication Receivers, Volume 2: Synchronization, Channel Estimation, and Signal Processing offers a complete treatment on the theoretical and practical aspects of synchronization and channel estimation from the standpoint of digital signal processing. The focus on these increasingly important topics, the systematic approach to algorithm development, and the linked algorithm-architecture methodology in digital receiver design are unique features of this book. The material is structured according to different classes of transmission channels. In Part C, baseband transmission over wire or optical fiber is addressed. Part D covers passband transmission over satellite or terrestrial wireless channels. Part E deals with transmission over fading channels. Designed for the practicing communication engineer and the graduate student, the book places considerable emphasis on helpful examples, summaries, illustrations, and bibliographies. Contents include:

- Basic material
- Baseband communications
- Passband transmission
- Receiver structure for PAM signals
- Synthesis of synchronization algorithms
- Performance analysis of synchronizers
- Bit error degradation caused by random tracking errors
- Frequency estimation
- Timing adjustment by interpolation
- DSP system implementation
- Characterization, modeling, and simulation of linear fading channels
- Detection and parameter synchronization on fading channels
- Receiver structures for fading channels
- Parameter synchronization for flat fading channels
- Parameter synchronization for selective fading channels

From reader reviews:

Kathy Wilson:

Information is provisions for those to get better life, information these days can get by anyone with everywhere. The information can be a know-how or any news even a problem. What people must be consider any time those information which is in the former life are challenging be find than now is taking seriously which one is appropriate to believe or which one the actual resource are convinced. If you obtain the unstable resource then you get it as your main information we will see huge disadvantage for you. All of those possibilities will not happen in you if you take Digital Communication Receivers, Synchronization, Channel Estimation, and Signal Processing as your daily resource information.
